

StreamZ

...

Tema 3 - StreamZ (Parte 1)

2MIEIC07_G8 - AEDA

Filipe Campos | up201905609

Francisco Cerqueira | up201905337

Vasco Alves | up201808031

Descrição do Problema

Desenvolver uma plataforma de streaming com diferentes tipos de utilizadores e streams que seja capaz de efetuar diversas ações sobre estes

Descrição da Solução

- Utilização de classes adequadas para representação das entidades envolvidas;
 - Utilização correta de herança e polimorfismo;
 - Tratar convenientemente de possíveis exceções;
 - Usar algoritmos de pesquisa e ordenação;
 - Escrita e leitura de ficheiros.
-

Algoritmos Relevantes

Search

- Sequential Search
- Binary Search

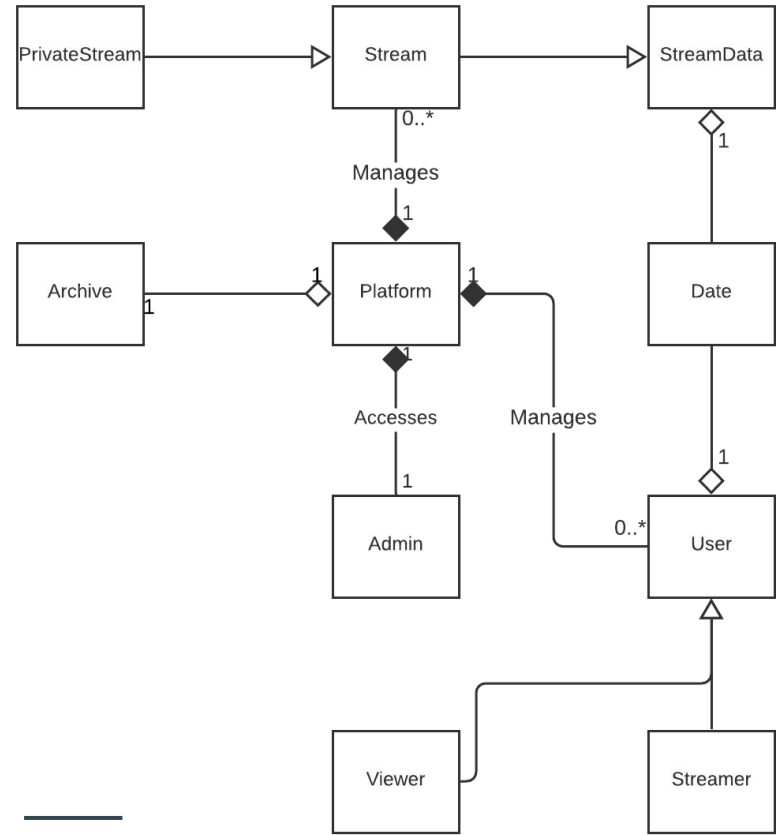

Sort

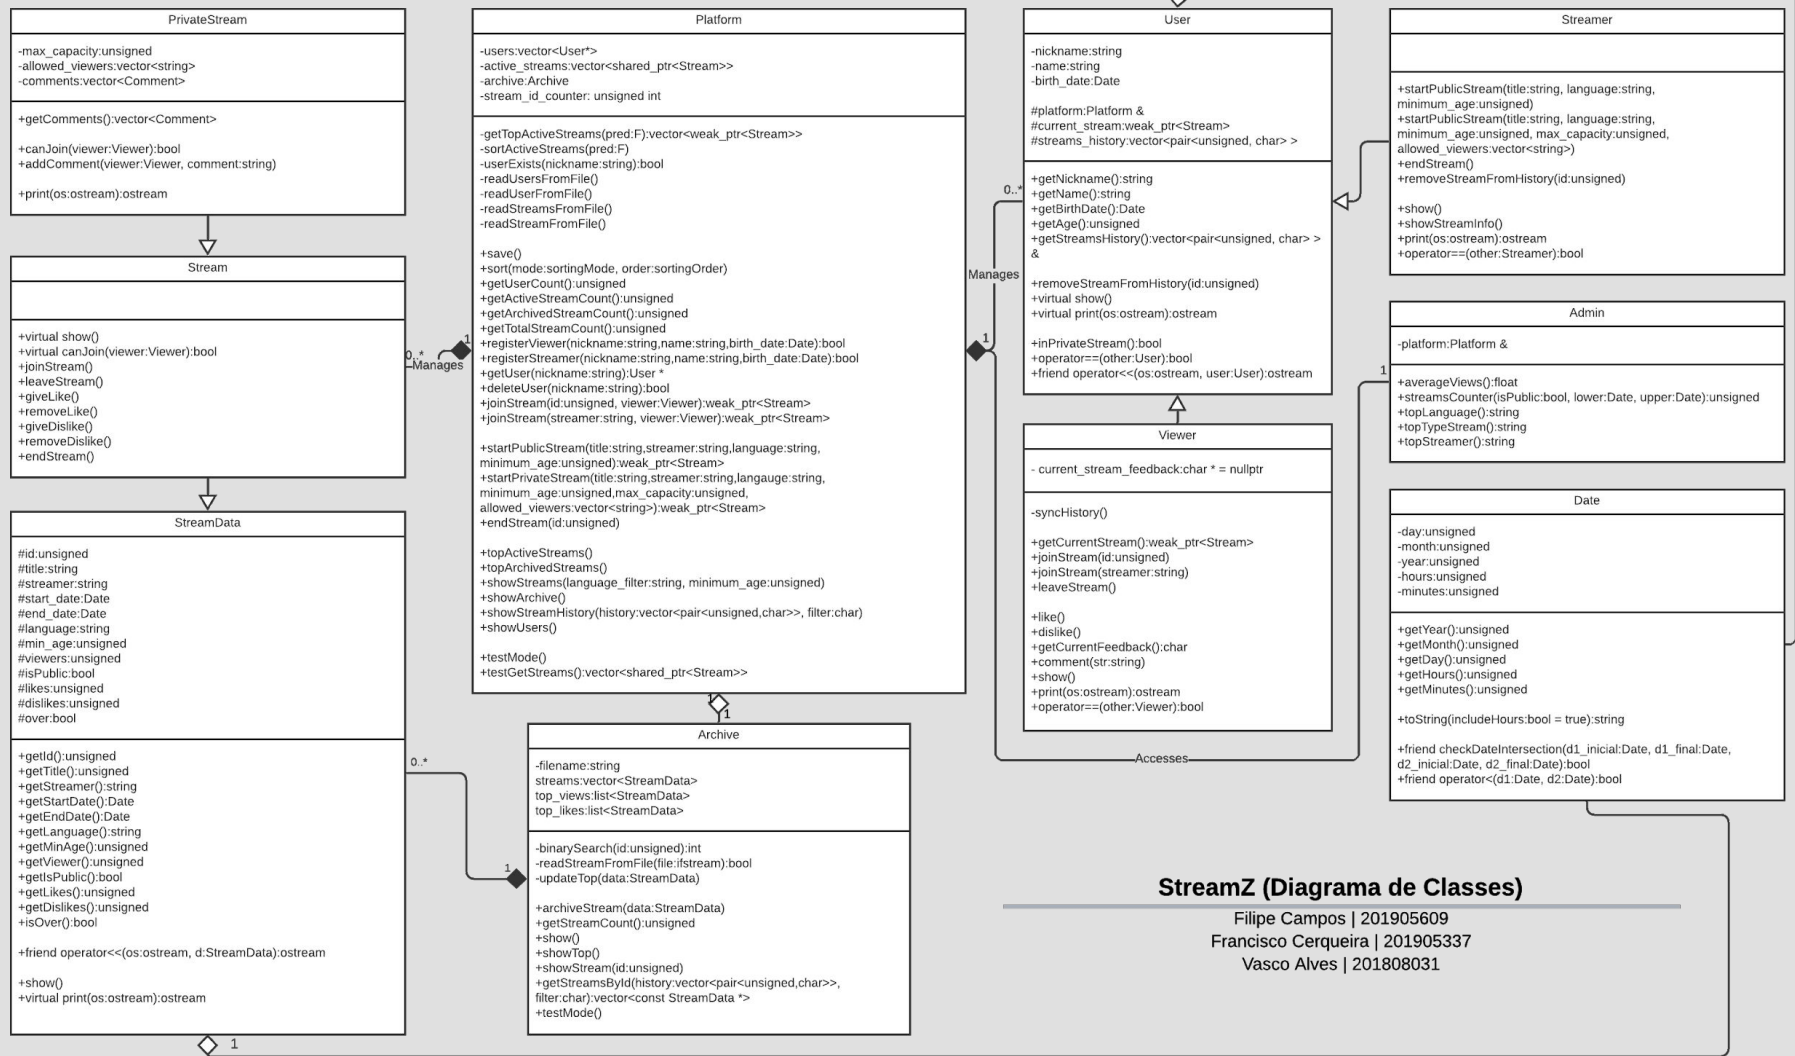

- Sort (STL)
- Insertion Sort
- Partial

```
template <typename F>
std::vector<std::weak_ptr<Stream>> Platform::getTopActiveStreams(F pred) {
    std::vector<std::weak_ptr<Stream>> top10;
    int n_elements = active_streams.size() > 10 ? 10 : active_streams.size();
    top10.reserve(n_elements);
    std::stack<decltype(active_streams.begin())> s;

    // Custom insertion sort, where 10 greatest elements are inserted into the first 10 index
    for(auto it = active_streams.begin(); it != active_streams.begin() + n_elements; ++it){
        auto max_it = std::max_element(it, active_streams.end(), pred);
        s.emplace(max_it);
        std::iter_swap(it, max_it);
    }
    for(int i = 0; i < n_elements; ++i){
        top10.emplace_back(active_streams[i]);
    }
    // Unwind the changes made, restoring original vector state
    auto it = active_streams.begin() + n_elements - 1;
    for(int i = 0; i < n_elements; ++i, --it){
        std::iter_swap(s.top(), it);
        s.pop();
    }
    return top10;
}
```

Diagrama de Classes

active_streams.txt

```
bool Archive::readStreamFromFile(std::ifstream &file) {
    std::string str;
    std::vector<std::istream> lines;
    for(int i = 0; i < 5; ++i){
        if(!getline(&file >> std::ws, &str)){
            return false;
        }
        lines.emplace_back(str);
    }

    char discard;
    unsigned id, likes, dislikes, views, minimum_age;
    std::string title, streamer, stream_type, language, start_date, end_date;

    lines[0] >> discard >> id >> discard;
    std::getline(&lines[0] >> std::ws, &title);
    lines[1] >> str >> streamer;
    lines[2] >> stream_type >> language >> views >> str >> likes >> str >> dislikes;
    start_date = lines[3].str().substr(pos: 0, n: 16); end_date = lines[3].str().substr(pos: 19, n: 16);
    lines[4] >> str >> minimum_age;
    streams.emplace_back(id, title, streamer, start_date, end_date, language, views,
        isPublic: stream_type=="public", minimum_age, likes, dislikes, over: true);
    updateTop( data: *(streams.rbegin()));
    return true;
}
```

Read stream from archive.txt

```
(viewer) kolton149 Kolton
    129 10/05/1978
    history: 43L 52D 25L 73- 129L
(streamer) audrey359 Audrey
    153 06/11/1922
    history: 1- 3L
```

users.txt

Tratamento de Exceções

```
class UserDoesNotExist : public std::exception{...};

class UserAlreadyExists : public std::exception{...};

class InvalidAge : public std::exception{...};

class InsufficientAge : public std::exception{...};

class StreamNoLongerActive : public std::exception {...};

class StreamDoesNotExist : public std::exception {...};

class StreamerNotStreaming : public std::exception {...};

class InvalidAction : public std::exception {...};

class InvalidDate : public std::exception {...};
```

Exemplo: UserDoesNotExist

```
Menu * LoginUserMenu::getNextMenu() {
    if(!logged_in){
        std::string username;
        if(!input::get( & username)){
            return invalidOption();
        }
        try{
            User * ptr = platform.getUser(username);
            Streamer * streamer_ptr = dynamic_cast<Streamer *>(ptr);
            if(streamer_ptr){
                logged_in = true;
                return new StreamerMenu( & platform, streamer_ptr);
            }
            Viewer * viewer_ptr = dynamic_cast<Viewer *>(ptr);
            if(viewer_ptr){
                logged_in = true;
                return new ViewerMenu( & platform, viewer_ptr);
            }
        }
        catch(const UserDoesNotExist &e){
            std::cout << "User " << e.getNickname() << " does not exist" << std::endl;
            input::waitEnter();
        }
    }
    return nullptr;
}
```

Funcionalidades Implementadas

Create

Read

Update

Delete

- Adicionar/remover utilizadores:
 - Streamer
 - Viewer
- Adicionar/remover streams:
 - Public Stream
 - Private Stream
- Visualizar informações sobre utilizadores e streams:
 - Histórico de streams
 - Feedback (Comentários/Likes/Dislikes)
- Ler/escrever informações de/em ficheiros
 - Active/Archive Streams
 - Users
- Administrador
 - Acesso Privilegiado

Todas as funcionalidades encontram-se completas

Funcionalidades Implementadas

Listagem / Pesquisa

```
float averageViews() const;
unsigned int streamsCounter(bool isPublic, const Date &lower, const Date &upper) const;

Funcionalidade Destaque

Comentários

```
struct Comment{  
    Date date; /**< Comment date */  
    std::string nickname; /**< Viewer nickname */  
    std::string comment; /**< Comment message */  
};
```

```
void PrivateStream::addComment(const Viewer &viewer, const std::string &comment){  
    Comment c;  
    c.date = Date();  
    c.nickname = viewer.getNickname();  
    c.comment = comment;  
    comments.push_back(c);  
}
```

Comments:

```
(19/11/2020 22:29)  ronin144 "This stream is very nice!"  
(19/11/2020 22:29)  journi196 "Meh, it could be better."
```

Principais Dificuldades

De modo a garantir o correto funcionamento da aplicação foi necessário garantir que, após um streamer terminar a sua stream, todos os viewers ligados sejam removidos.

```
class Platform {
private:
    std::vector<std::shared_ptr<Stream>> active_streams;
```

```
class User {
protected:
    std::weak_ptr<Stream> current_stream;
```
